Claims 1-19 of this application conflict with the claims of Application Nos. 10/661397 and 10/661388. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant does not clearly teach what is encompassed by "a stabilizing agent of a nucleophile that contains at least one atom having at least one lone pair of electrons." In view of the specification this will be interpreted to include anything that contains at least one atom of sulfur, nitrogen, oxygen or carbon.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1761

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Reich et al (US Patent No. 3,421,906) and Bel Rhlid et al (EP 0963706).

Reich et al teach coffee stabilization using sulfur dioxide (see entire patent, especially claims 1 and 2).

Bel Rhlid et al teach a precursor flavoring mixture, which forms thiols upon heating (see entire document, especially claim 1).

The claims appear to differ as to increasing amounts of compounds that provide or improve desirable flavor and reducing amounts of compounds that suppress desirable flavor characteristics.

The prior art teaches the claimed components and process steps. Consequently, increasing amounts of compounds that provide or improve desirable flavor and reducing amounts of compounds that suppress desirable flavor characteristics would be inherent and/or obvious to that of Reich et al and Bel Rhlid et al.

It is again noted that Applicant does not clearly teach what is encompassed by “a stabilizing agent of a nucleophile that contains at least one atom having at least one lone pair of

electrons.” This limitation has been interpreted to include anything that contains at least one atom of sulfur, nitrogen, oxygen or carbon.
